

Labour's Green New Deal

A briefing for campaigners

Responding to the environmental emergency is at the centre of Labour's manifesto, Its time for real change.

**We are committed to a just transition to a green economy
Workers and the poor will not pay the price.**

WE will work with the trade unions and scientists to net zero carbon emissions by the 2030s

WE will create one million good unionised jobs with public ownership of energy, creating an integrated, democratic system and major investment in renewables and low-carbon energy

WE will address regional economic imbalances and areas of deprivation

WE will take transport into public ownership to make it work for everyone, investing in expanded, integrated, free or affordable green public transport

WE will ban fracking

WE will repeal anti-union laws

WE will tackle fuel poverty

WE will up skill the workforce to develop, manufacture and manage the greening of Britain.

And much, much more.

There will be massive resistance from the corporations. And we must convince some the unions that greening the economy will not be at the expense of well-paid skilled jobs.

It's time for real change! Another World is Possible!
